THE \$X PROJECT

WHAT IS \$X ?

X is a cryptocurrency born in the wake of Twitter's name change to "X" due to a tweet from Elon Musk. We took the opportunity to develop a token that capitalizes on the immense hype surrounding the name "X," especially when it comes to tweets from Elon Musk himself!

The core vision of X is to create a decentralized and innovative financial ecosystem that empowers its community members and investors alike. By harnessing the power of blockchain technology, X seeks to revolutionize traditional financial systems and provide a platform that is transparent, secure, and efficient.

THE \$X PROJECT

EXISTING PROBLEMS

The decentralized finance (DeFi) space has witnessed significant growth in recent years, with numerous projects aiming to revolutionize traditional financial systems. However, one particular segment within DeFi has emerged as both captivating and challenging - the Degen Market. High-risk, high-reward strategies dominate this space, attracting fearless investors seeking extraordinary gains but facing increased exposure to potential losses

THE \$X PROJECT

TAX MECHANISM AND TOKENOMICS

The \$X Project is designed with a unique tax mechanism to ensure a fair and sustainable ecosystem for all investors. As part of our commitment to transparency and community growth, we have implemented a tax on both buy and sell transactions.

Tax Accumulation	Token Supply And Fair Entry
<ul style="list-style-type: none">- On every buy transaction, a 1% tax is applied to the purchase amount.- Similarly, on every sell transaction, a 1% tax is levied on the sell amount.- These taxes are automatically accumulated within the contract until it reaches a total supply of 10 billion \$X tokens.	<ul style="list-style-type: none">- The accumulation of taxes up to 10 billion tokens is a deliberate strategy to create a fair entry point for new investors.- By accumulating taxes and not immediately selling, we allow new investors to enter the project at a reasonable price, promoting a more inclusive and diverse community.

THE \$X PROJECT

TAX MECHANISM AND TOKENOMICS

Token Sell At 10B Supply	Buyback Mechanism
<ul style="list-style-type: none">- Upon reaching the 10 billion token supply, the contract will initiate a sell mechanism to convert the accumulated taxes into liquidity.- This process aims to enhance the liquidity pool, providing stability and depth to the token ecosystem.	<ul style="list-style-type: none">- A significant portion of the taxes collected during the sell will be allocated for a buyback mechanism.- The buyback mechanism enables the project to support the token's price and reward long-term holders.

THE \$X PROJECT

MARKETING OPERATIONS

- The remaining portion of the taxes collected during the sell will be dedicated to marketing operations.
- These funds will be utilized to increase brand awareness, expand the community, and drive strategic partnerships.

THE \$X PROJECT

COMMITMENT TO INVESTORS

The tax mechanism and tokenomics of the \$X Project reflect our dedication to building a sustainable and investor-friendly environment. By implementing taxes on transactions and utilizing them strategically, we aim to bolster liquidity, support the token price, and foster long-term growth. The funds allocated for marketing will fuel our efforts to promote the project and ensure it reaches its full potential.

THE \$X PROJECT

CEX PARTNERSHIPS

The partnership between crypto project \$X and several prominent centralized exchanges, namely MEXC, DigiFinex, Bitmart, and LBank, represents significant step forward in the growth and adoption of \$X within the crypto ecosystem. This collaboration brings together the strengths and expertise of both parties, fostering a mutually beneficial relationship that benefits traders, investors, and the project itself.
